

Unity Enterprise Solutions of Leeds UK, reveal jdeDirect ODBC drivers for JD Edwards OneWorld. Revolutionising data access for users of OneWorld by communicating directly with the security server and data dictionary providing the freedom to externally access ALL OneWorld business data.

Key Features

Enable industry standard date formatting.

Automatically activate numerical decimalisation.

Enable UDC descriptions in virtual columns.

Service your organisation on a global scale through language preferences.

Present full column and table name descriptions.

Connect to multiple environments at the same time.

Present a distributed database as a single seamless database by applying your OCM mappings.

Will operate on fat clients, thin clients, over citrix, with or without OneWorld being loaded.

Fully compliant with your MS Office suite.

Installs as a ODBC driver, behaves like any other ODBC driver with ANY ODBC compliant application.

Empower your users with jdeDirect ODBC drivers and Seagate Crystal Reports. No longer using up valuable IT resource to develop custom reports with ERW.

Publish data straight from your database onto the web without going through a costly data translation exercise.

Implement 3rd party software without training the software supplier on the complexities of the JD Edwards database.

jdeDirect ODBC drivers is a Windows middleware solution for connecting third party products and other custom applications to JD Edwards OneWorld software. jdeDirect drivers accept standard ODBC function calls and translates them into native JD Edwards SQL. They can communicate with any JD Edwards security server, database server and Data Dictionary to access, retrieve and present data held within a JD Edwards database into a human readable form.

jdeDirect ODBC products provide the highest ODBC level 3.5 conformance. All our jdeDirect drivers are tested using the current releases of Microsoft Data Access Components to ensure that they are compatible with the latest generation of development tools.
